

METADATA WORKING GROUP REPORT

T. Yoshie
CCS, Univ. of Tsukuba
@ILDG19, May 10th 2013

QCDML STATUS

- ◎ Current version of QCDml is stable
 - since Apr. 2007, when we released
 - ✓ Ensemble XML version 1.4
 - ✓ Configuration XML version 1.3

- ◎ Latest revisions are
 - ✓ QCDmlEnsemble1.4.7 (2010/12/07)
 - ✓ QCDmlConfig1.3.1 (2010/01/17)
 - note:
 - Schema of the latest Ensemble XML is not placed at the official address
 - This may case a trouble in validation of ensemble XML
 - We will fix this soon

WORKING GROUP STATUS

- No update of QCDml for more than two years
 - because WG has not received any request to markup new actions and things
 - there are QCDml related works,
 - e.g. metadata capture project
 - but independent of WG
- Some WG members think that
 - status of ILDG has changed from development-phase to practical-use-stage
 - ILDG is already working as an useful infrastructure
- WG has no passion to tackle a new project
 - such as propagator sharing, developing new metadata tools

PROPOSAL AND ISSUE

- ◉ Focus on maintaining the ILDG
 - markup new actions when requested
 - fix problems and bugs if exist
- ◉ need a new convener
 - the convener of the WG has left
 - at least as a contact person
- ◉ WG member

G.Andronico (INFN)

P.Coddington (Adelaide)

C.DeTar (Utah)
